

# Switching to Single-Use Cannulas

## Top Reasons to Improve Your Clinic's Workflow

When it comes to patient safety, there is no room for compromise. That's why many healthcare facilities are making the switch to single-use cannulas for their procedures. Not only do they reduce the risk of surgical site infections and cross contamination, but they also offer significant benefits in terms of time, surgery results and cost savings.

Amazing what's possible.

If you are looking for ways to improve patient safety, efficiency, and cost saving, look no further than ordering single-use cannulas. Make the switch to single-use cannulas and experience the difference in efficiency and effectiveness.

### *Patient Safety First*

The primary benefit of single-use cannulas is patient safety. With the use of a new, sterile cannula for each patient, the risk of infection or contamination is greatly reduced.

### *Time is Precious – Save Some*

Single-use cannulas save time and increase efficiency. With reusable cannulas, medical staff must clean, disinfect, and sterilize them between uses, which takes up valuable time and resources. Single-use cannulas are ready to use right out of the package, so more time can be devoted to patient care, resulting in improved outcomes and patient satisfaction.

### *A Penny Saved is a Penny Earned*

Single-use cannulas offer significant cost savings in the long run. They are always ready in perfect condition, with no ongoing costs of upkeep. This means fewer expenses overall and a more cost effective solution for facilities since reusable cannulas require an ongoing upkeep and repurchasing of sterilization supplies, as well as the cost of employee time for cleaning.

### *Flexibility for Better Results*

Bendable cannulas allow for a more coordinated and precise approach, resulting in optimal results. The shape of the instrument can be customized to fit the patient's unique anatomy and specific re-equipments. Target sites can be reached with ease without exerting unnecessary force or causing discomfort to the patient. Experience the difference in efficiency and effectiveness.
